NEWBURGH, NEW YORK

P. DELANY & CO.

IN presenting this booklet, we have not attempted to describe all of our specialties; the principal one is steam boilers, both for Stationary and Marine use, but rather by illustrating a few special machines or apparatuses, present to our customers the large range and variety of work we are equipped to manufacture.

¶ We construct Marine Boilers weighing from fifty to sixty tons to small tanks of one hundred pounds in weight made from plates, in the large Boilers of 1½ in. in thickness to light plates in the small tanks $\frac{1}{32}$ in. thick.

¶ This wide range of work compels us to employ a large force of skilled mechanics and, therefore, we are well adapted and experienced in the construction of various special machines and apparatuses required by many industries.

¶ We solicit inquiries for all kinds of machinery; we are prepared to design and construct special apparatuses similar to those illustrated.

¶ Catalogues giving detail dimensions of the standard machines will be mailed upon application.
